

BIOMETRICS

EAGLE* BIOMETRICS

FEATURE RICH LIVE SCAN FINGERPRINTING

• COST-EFFECTIVE AND FEATURE-RICH LIVE SCAN FINGERPRINTING

Eagle*Print enables operators to input or capture a subject’s demographic information, fingerprints, palm prints, and mugshots in NIST-compliant format. A variety of scanning, imaging, and input peripherals streamline the process. The system submits captured data to state-run or national AFIS (Automated Fingerprint Identification System) clearinghouses for identification, background checks, and booking purposes. The system can also print FBI Applicant, Criminal, or Palm Print cards for archiving or hand-carrying. Additionally, it can be configured to receive, display, and print state and FBI responses, subject to local regulations. Whether processing 20 or 20,000 records per month, Eagle*Print can be customized to meet your needs.

• LIVE SCAN OPTIONS

Live Scan Fingerprinting is tailored for law enforcement agencies, schools, courts, and airlines and other government agencies conducting background checks. Our system provides both the hardware and software solution for a seamless experience.

• EAGLE*STORE & FORWARD

Encrypted submissions from multiple Live Scans within the organization can be sent to the Store & Forward server. The server then forwards the data to our GCIC server or directly to the AFIS via hardware VPN. Responses come back to the Store & Forward server along the same encrypted path the records were submitted.

KEY FEATURES:

- CJIS Compliance
- Criminal Background Submissions
- Applicant Background Submissions
- Driver’s License Import Interface
- JMS Interface
- Customizable User Permissions
- 10- Print Fingerprint Scanners
- Palm Print Fingerprint Scanners

Mobile & Desktop Options

FBI & State Compliance

Efficiency & Fast Processing
